1

Safe and ergonomic

The driver's compartment is designed with full ergonomic aspects in mind. This means, on the one hand, the driver expects a generous inner compartment with exceptional head and legroom. On the other hand, both the full-suspension seat and the tilting steering column can be adapted individually to the body size of the driver. All operating controls are arranged ergonomically and can be operated individually and precisely. As a result the forklift can be operated in a easy controlled way, thereby ensuring a safe and fatigue free operation.

Thanks to the large high visibility cabin, the forklift operator enjoys excellent all-round visibility ensuring optimum views of both forks and load. This feature contributes not only to the safe handling of products, but also increases operator performance in a safe and reliable way.

2

High-rugged performance

All CLARK products are developed and built according to the tried and tested "Built to Last" concept. From 1917, CLARK has adhered to this concept, ensuring a sound and functional construction design using high-quality components, which guarantee safe and dependable operation over the entire service life of the forklift.

This starts with a fully welded heavy-duty chassis, a vibration-free mounted steer axle and a rugged seating position, all the way to the powerful and reliable industrial engine.

3

Clean and environmentally friendly

In the development of CLARK products the use of environmentally-friendly and low-emission drive designs are always at the forefront.

CLARK fulfils these demanding standards in the production of all of its model ranges. Environmentally-protective manufacturing procedures, certified acc. to ISO 14001 (Environmental Management System), are standard in all CLARK factories. CLARK products are up to 99 percent recyclable. By rejecting the use of environmentally harmful materials such as cadmium, asbestos and mercury, CLARK guarantees that the environment is damaged as little as possible in every way.

4

Economical and efficient

CLARK products also score well on the economic front. Equipped with optimum proven technology for high-performance material handling, as well as ergonomic and safe use without the need for cost-intensive and mostly superfluous gadgets, the trucks have excellent price-performance ratio. Dispensing with maintenance-intensive and costly components can clearly be seen in the total cost of ownership – the costs over the entire service life of all Clark products.

WAREHOUSE EQUIPMENT

HAND PALLET TRUCK

Hand Pallet Truck
2,500 kg

WPio 12

Lithium-Ion Hand Pallet Truck
1,200 kg

WPio 15

Lithium-Ion Low-lift Pallet Truck
1,500 kg

PPFXS 20

Low-lift Pallet Truck Platform version
2,000 kg
